

DR. JANE GOODALL

SHE / HER

**ETHOLOGIST & ENVIRONMENTALIST;
THE WORLD'S LEADING EXPERT
ON CHIMPANZEES**

Goodall's extensive long-term research on the Gombe chimpanzees changed the way we understand chimpanzees and modern humans. Her research challenged ideas surrounding the uniqueness of certain human behaviours and where these behaviours developed in hominin evolution. Today, Goodall works tirelessly to raise awareness about the threats facing chimpanzees, other environmental crises, and her reasons for hope that we will ultimately solve the problems that we have imposed on the earth.
